

To create a cleaner, more comfortable environment in your Suzuki, speak to your local Suzuki Dealer or visit suzuki.co.uk.

When to replace the filter:

The filter is composed of fibres. When used over a long period of time, these can become clogged with dust and pollen, resulting in poor ventilation and inefficient air-conditioning when you need it most. In cold weather, it may also take longer to clear the frost and any condensation from your vehicle's windshield.

Replacement guideline:

For maximum efficiency, your air-conditioner filter should be replaced regularly. This guideline may vary depending on your filter type, condition of use and region. For more information, please see your owner's manual or ask your Suzuki Dealer.

KEEP AIR IN YOUR CAR CLEAN & COMFORTABLE

Are your journeys as comfortable as they could be?

Whether you're heading off on holiday or heading into town, you need complete comfort and control. In your car, the best source of comfort comes from your air-conditioning. When it's performing at 100% efficiency, you can be sure of maximum comfort for you, and your passengers, in all kinds of driving conditions.

When your air-conditioning system isn't used regularly, bacteria and mould may develop from a combination of condensation and heat from the engine. A Suzuki air-conditioning service is a thorough check of your air-conditioning system by a Suzuki trained Technician who knows your car inside and out. We'll check for leaks and damages to pipework, we'll re-gas the air-conditioning system, we'll check air circulation, change the air-conditioning filter and check all controls. So you can drive away in comfort and get on with making the most out of your way of life.

What is an air-conditioner filter?

Your air-conditioner filter blocks dust, pollen, sand and mites to ensure a constant supply of fresh clean air is supplied to the cabin of your car. So you reach every destination feeling just as fresh as when you pulled out of the driveway.

DESIGNED FOR MAXIMUM COMFORT AND COMPLETE CONTROL

Suzuki genuine air-conditioner filters:

Designed to tackle the dust and dirt of every day life, they include:

Dustproof Effect

Blocks dust, pollen, sand and mites to create a cleaner flow of air.

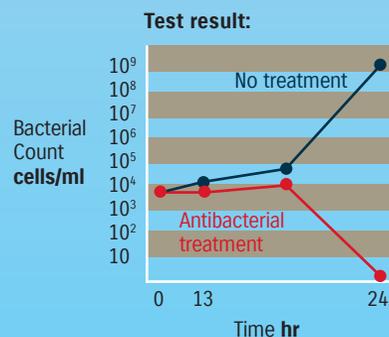

Deodorising Effect

Active carbon or tea-catechin to remove unpleasant odours such as tobacco and car exhaust fumes.

Antibacterial Effect

Medicative tea-catechin in the fibre layer to suppress any bacteria or mould in the trapped dust.

Anti-Allergen Effect

Active carbon or tea-catechin to remove airborne dust and pollen.
